I Introduction and Data Processing

1 Introduction to IIS

- 1.1 Introduction
- 1.2 What's it all about?
 - 1.2.1 The Turing test
 - 1.2.2 An alternative definition
- 1.3 Computational Intelligence
- 1.4 Rule-Based
- 1.5 Artificial Neural Networks and Learning Systems
- 1.6 Evolutionary Algorithms
- 1.7 Conclusions

2 Simple & Linear Transformations

- 2.1 Introduction
- 2.2 Data Transformation
- 2.3 Linear vs Non-Linear
- 2.4 Normalisation
- 2.5 Moving Average
- 2.6 Sampling
- 2.7 Discretisation
- 2.8 Image Transformations
- 2.9 Summary

3 Non-Linear Transformations

- 3.1 Introduction
- 3.2 Linear vs Non-Linear Transformations
- 3.3 Image Transformations
- 3.4 Signals and Waves
 - 3.4.1 Signals
 - 3.4.2 Properties of Waves
- 3.5 Fourier Transformations
- 3.6 Wavelet Transformations
- 3.7 Summary

II Rule-Based Systems

4 Crisp Rule Based Systems

- 4.1 Introduction
- 4.2 Production Systems
- 4.3 Facts
 - 4.3.1 Templates
- 4.4 Production Rules
- 4.5 The Inference Process
- 4.6 Advantages and Disadvantages of Production Systems
- 4.7 Expert Systems
- 4.8 The Inference Process
 - 4.8.1 Forward Chaining
 - 4.8.2 Backward Chaining
- 4.9 Summary

5 Fuzzy Sets & Fuzzification

- 5.1 Introduction
- 5.2 Crisp Sets
- 5.3 Fuzzy Sets
- 5.4 Membership Functions
 - 5.4.1 Singleton MF
 - 5.4.2 Rectangular MF
 - 5.4.3 Triangular MF
 - 5.4.4 Gaussian MF
 - 5.4.5 Other Representations of MF
- 5.5 Fuzzification
- 5.6 Fuzzy Logic
- 5.7 Summary

6 Fuzzy Inference & defuzzification

- 6.1 Introduction
- 6.2 Crisp Rules
- 6.3 Fuzzy Sets
- 6.4 Fuzzy Rules
- 6.5 Fuzzy Inference
- 6.6 Tipping Example
 - 6.6.1 Min Inference
 - 6.6.2 Product inference
- 6.7 Fuzzy Composition
 - 6.7.1 MAX Composition
- 6.8 Defuzzification
 - 6.8.1 COG Defuzzification
 - 6.8.2 MoM Defuzzification
- 6.9 Summary

7 Fuzzy Systems

- 7.1 Introduction
- 7.2 Fuzzy Systems
- 7.3 Developing a Fuzzy System
 - 7.3.1 Identify the problem
 - 7.3.2 Define the input and output variables
 - 7.3.3 Define the membership functions
 - 7.3.4 Define the fuzzy rules
 - 7.3.5 Select the inference / composition methods
 - 7.3.6 Select the defuzzification method
 - 7.3.7 Validate the system
- 7.4 Advantages and Disadvantages of Fuzzy Systems
- 7.5 Summary

8 Type-2 Fuzzy Systems

- 8.1 Introduction
- 8.2 Problems with fuzzy systems
- 8.3 Type-2 fuzzy systems
- 8.4 Interval Type-2 fuzzy systems
- 8.5 Non-Stationary Fuzzy Sets
- 8.6 Summary

9 Applying Fuzzy Systems

- 9.1 Introduction
- 9.2 Advantages of Fuzzy Systems
- 9.3 Pattern Recognition
 - 9.3.1 Handwriting Recognition

- 9.3.2 Iris Classification
- 9.4 Fuzzy Control Systems
 - 9.4.1 Inverted Pendulum
 - 9.4.2 Sendai Subway
 - 9.4.3 Washing Machines
- 9.5 Decision Making
- 9.6 Summary

III Neural Networks and Learning Systems

10 Biological & Artificial Neurons

- 10.1 Introduction
- 10.2 Biological Neurons
- 10.3 Biological Neural Networks
- 10.4 Artificial Neurons
- 10.5 Activation Functions
- 10.6 Artificial Neural Networks
- 10.7 Summary

11 Perceptrons

- 11.1 Introduction
- 11.2 Perceptron Architecture
- 11.3 Problems with Perceptrons
- 11.4 Advantages and Disadvantages of Perceptrons
- 11.5 Summary

12 Multi-Layer Perceptrons

- 12.1 Introduction
- 12.2 Multi-Layer Perceptrons
- 12.3 Advantages and Disadvantages of MLP
- 12.4 Summary

13 Backpropagation Training

- 13.1 Introduction
- 13.2 Backpropagation of Errors
- 13.3 Error Calculation
- 13.4 Error Surface
- 13.5 Pattern vs Batch Training
- 13.6 Restrictions on and Problems with Backprop
- 13.7 Summary

14 Kohonen Self-Organising Maps

- 14.1 Introduction
- 14.2 Vector Quantisation
- 14.3 Unsupervised Learning
- 14.4 Kohonen Self-Organising Topological Maps
- 14.5 SOM Training
- 14.6 SOM Mapping
- 14.7 SOM Recall
- 14.8 Labelling
- 14.9 Summary

15 Hybrid Neuro-Fuzzy Systems

- 15.1 Introduction
- 15.2 Disadvantages of Neural and Fuzzy Systems

- 15.3 Combining Neural and Fuzzy systems
- 15.3 ANFIS
- 15.4 FuNN
- 15.5 Summary

16 Support Vector Machines

- 16.1 Introduction
- 16.2 Support Vectors
- 16.3 Binary SVM
- 16.4 Learning in SVM
- 16.5 Multiclass SVM
- 16.6 Regression with SVM
- 16.7 Advantages and Disadvantages of SVM

17 Applying ANN

- 17.1 Introduction
- 17.2 When to use an ANN
- 17.3 Preparing the Data
- 17.4 What kind of ANN to use
- 17.5 Training ANN
- 17.6 Summary

IV Evolutionary Algorithms

18 Evolution

- 18.1 Introduction
- 18.2 Evolution
- 18.3 Lamarckian Evolution
- 18.4 Mendellian Genetics
- 18.5 Darwinian Evolution
- 18.6 Summary

19 Genetic Algorithms

- 19.1 Introduction
- 19.2 Genetic Algorithms
- 19.3 Jargon
- 19.4 Advantages of GA
- 19.5 Disadvantages of GA
- 19.6 Simple Genetic Algorithm
- 19.7 Encoding Schemata
- 19.8 Fitness Evaluation
- 19.9 Selection
- 19.10 Creating New Solutions
- 19.10.1 Crossover
- 19.11 Mutation
- 19.11.1 Replacement Strategies
- 19.12 Word Matching Example
- 19.13 Summary

20 ES, EP & GP

- 20.1 Introduction
- 20.2 Evolutionary Algorithms
- 20.3 Evolution Strategies
- 20.4 Evolutionary Programming
- 20.5 Genetic Programming

20.6 Summary

21 Ant Colony Optimisation

- 21.1 Introduction
- 21.2 Graph Searching
- 21.3 Random Paths
- 21.4 Trails
- 21.5 Advantages of ACO
- 21.6 Disadvantages of ACO
- 21.7 Summary

22 Particle Swarm Optimisation

- 22.1 Introduction
- 22.2 Brainless Specks
- 22.3 Multidimensional Trajectories
- 22.4 Neighbourhoods
- 22.5 Advantages and Disadvantages of PSO
- 22.6 Summary

23 Applications of Evolutionary Algorithms

- 23.1 Introduction
- 23.2 Advantages of EA
- 23.3 Applying EA
- 23.4 EA Application Areas
- 23.5 Scheduling
- 23.6 Load Balancing
- 23.7 Engineering
- 23.8 Designing Hardware
- 23.9 Path Planning
- 23.10 Summary

24 Hybrid EA, Neural & Fuzzy Systems

- 24.1 Introduction
- 24.2 Advantages of Fuzzy Systems
- 24.3 Disadvantages of Fuzzy Systems
- 24.4 Applying EA to Fuzzy Systems
 - 24.4.1 Optimisation of MF
 - 24.4.2 Optimisation of Rules
 - 24.4.3 Optimisation of Fuzzy Systems
- 24.5 Problems with ANN
- 24.6 EA and ANN
 - 24.6.1 ANN Topology Selection by EA
 - 24.6.2 Initial Weight Selection
 - 24.6.3 Selecting Control Parameters
 - 24.6.4 EA Training
 - 24.6.5 Other Applications
- 24.7 Summary

V Applications of IIS

25 IIS & Speech Processing

- 25.1 Introduction
- 25.2 Speech Production
- 25.3 Speech Segments
- 25.4 Speech Data Capture
- 25.5 Representing Speech Data

- 25.6 Speech Processing
- 25.6.1 Speech Recognition
- 25.7 Summary

26 IIS & Bioinformatics

- 26.1 Introduction
- 26.2 What is Bioinformatics?
- 26.3 What is DNA?
- 26.4 How is DNA Processed in Cells?
 - 26.4.1 Transcription
 - 26.4.2 RNA Translation
- 26.5 DNA Data
 - 26.5.1 Representing Biological Data
- 26.6 Applications of IS to Biological Data
 - 2.6.6.1 Identifying DNA Promoter Sites
 - 2.6.2 RNA Splice Junction Detection
 - 26.6.3 Modelling the Genetic Code
 - 26.6.4 Protein Configuration Prediction
 - 26.6.5 Secondary Structure Prediction
 - 26.6.6 Protein Configuration Prediction
 - 26.6.7 Signal Peptide Cleavage
- 26.7 Summary

27 IIS & Business Applications

- 27.1 Introduction
- 27.2 Economic Data
- 27.3 Applications
- 27.4 Why is it Hard?
- 27.5 Methods to Use
- 27.6 Applications of IIS
- 27.7 Summary

28 IIS & Image Processing

- 28.1 Introduction
- 28.2 Image Data
- 28.3 Graphics Formats
 - 28.3.1 Raster Images
- 28.4 Image Analysis
- 28.5 Image Transformations
 - 28.5.1 Sobel filter
 - 28.5.2 Median filters
 - 28.5.3 Wavelet Transformations
- 28.6 Image Recognition
 - 28.6.1 Applications of Image Recognition
- 28.7 Summary
